Lab setup Cisco Packet Tracer

Cisco Packet Tracer is a powerful network simulation tool freely available to Cisco Networking Academy members. This guide will walk you through the entire process of getting it installed and set up on your computer.

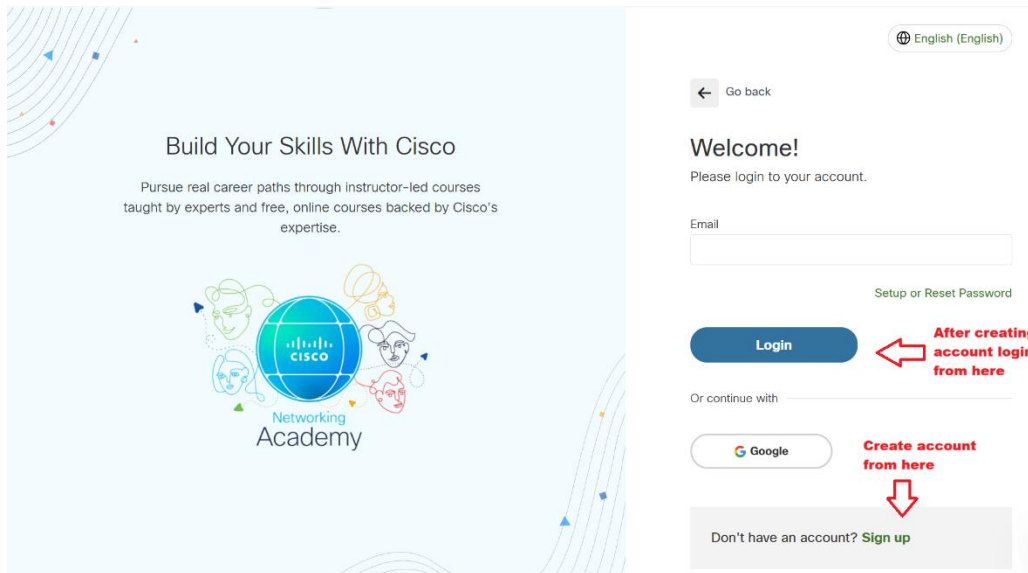

System Requirements

- Windows (10, 11)
- MacOS (12 or newer)
- Ubuntu (22.04, 24.04) LTS
- amd64(x86-64) CPU
- 4 GB of free RAM
- Min. 1.4 GB of free disk space

Create a Cisco Account

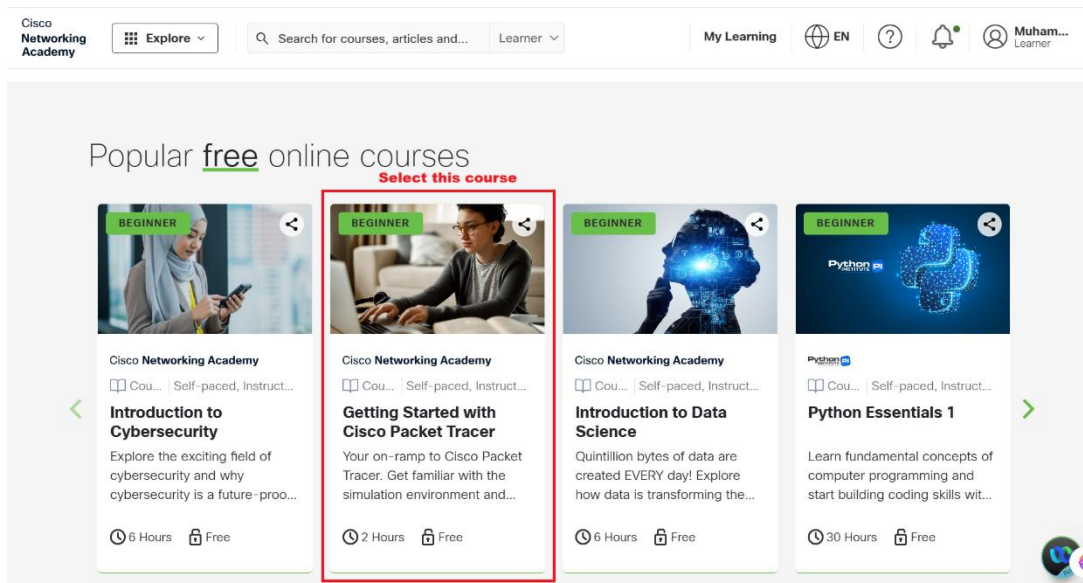

- <https://www.netacad.com/>
- Click on login button at top right corner

- Click on Sign Up button and create your account then return to this page and login to your account.

Download the Cisco Packet Tracer

- For downloading Cisco Packet Tracer select this Free course “Getting Started Cisco Packet Tracer”

The screenshot shows the Cisco Networking Academy interface for the course "Getting Started with Cisco Packet Tracer". The left sidebar displays the course outline, with "Module 1: Download and Use Cisco Packet Tracer" at 40% completion. The current video is "1.0.5 Video - Overview of Cisco Packet Tracer". The main content area shows a video player with a transcript section below it. The transcript includes a link to download Cisco Packet Tracer: <https://www.netacad.com/resources/lab-downloads>. A red box highlights this link, and a red arrow points to it with the text "Click on this link for download".

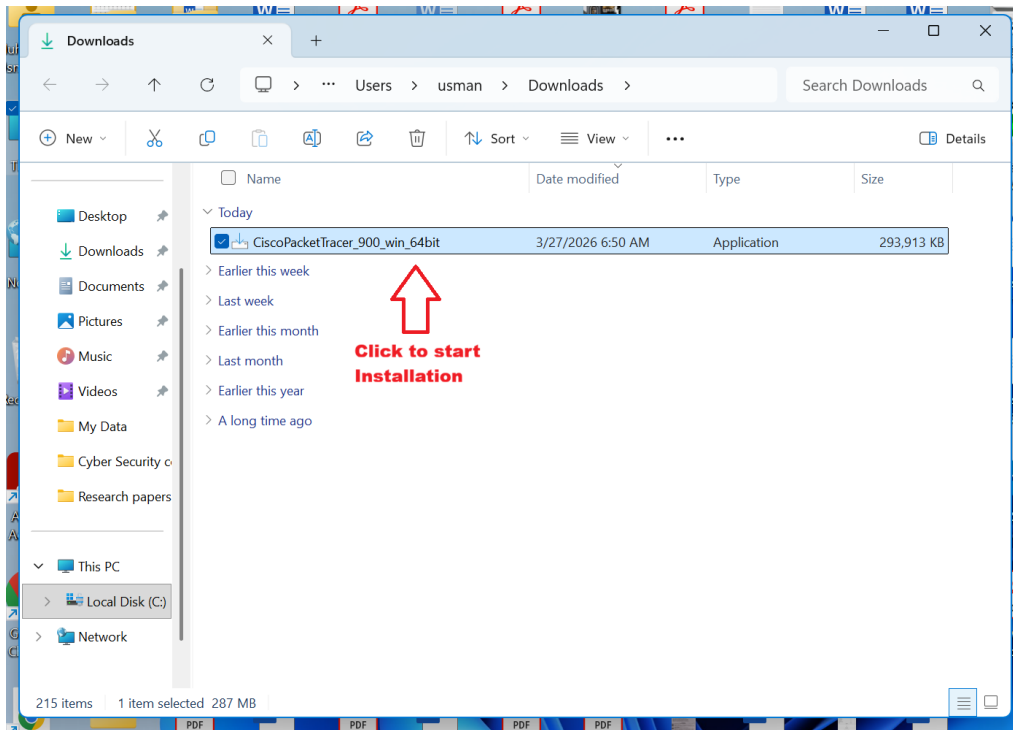

- In this Course in first module use the above-mentioned link to find the Cisco Resources page from where we will download the Cisco Packet Tracer
- <https://www.netacad.com/resources/lab-downloads>

The screenshot shows the footer of the Cisco Networking Academy page. It includes navigation links such as "Explore", "Search for courses, articles and...", "Learner", "My Learning", "EN", and a user profile for "Muham... Learner".

Learning Resources

The screenshot shows the "Cisco Packet Tracer" download page. It includes a diagram of a network topology and a list of download links for different operating systems: "Packet Tracer 9.0.0 MacOS 64bit", "Packet Tracer 9.0.0 Ubuntu 64bit", and "Packet Tracer 9.0.0 Windows 64bit". A red arrow points to the Windows link with the text "Download from here for Windows or for Linux and Mac from above links". The page also includes a "System Requirements" section: "Computer with either Windows (10, 11), MacOS (12 or newer) or Ubuntu (22.04, 24.04) LTS operating system, amd64(x86-64) CPU, 4 GB of free RAM, 1.4 GB of free disk space".

- From here download the Cisco Packet Tracer according to your Operating system.

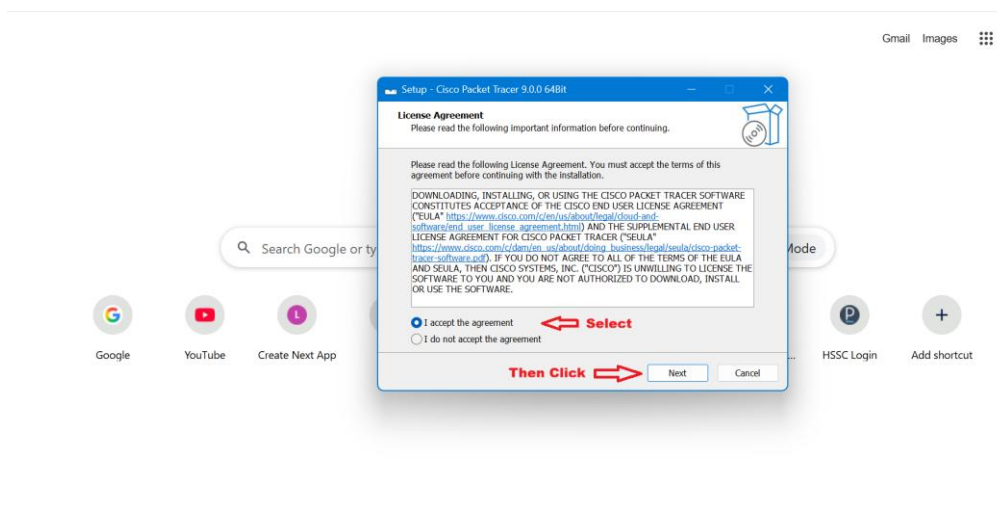

- Successfully downloaded the Cisco Packet Tracer for Windows.

Install the Cisco Packet Tracer Application

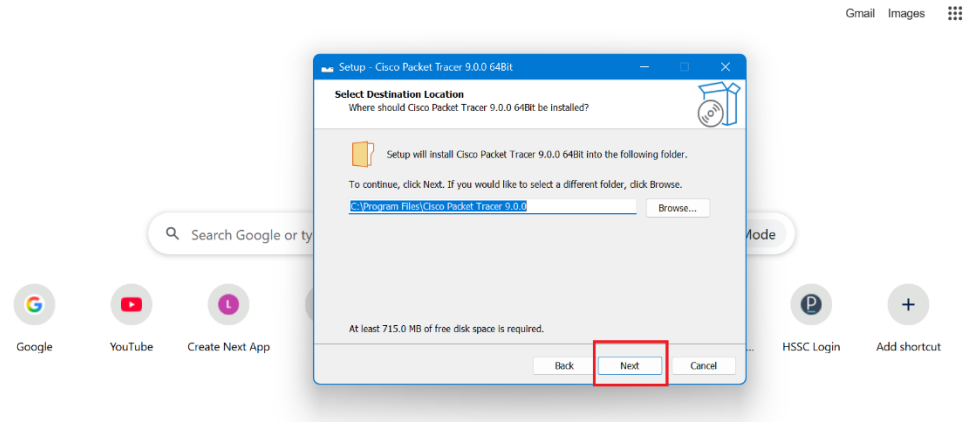

In different operating systems the installation process slightly varies. For Window its simple and described below.

Step 1: Run setup

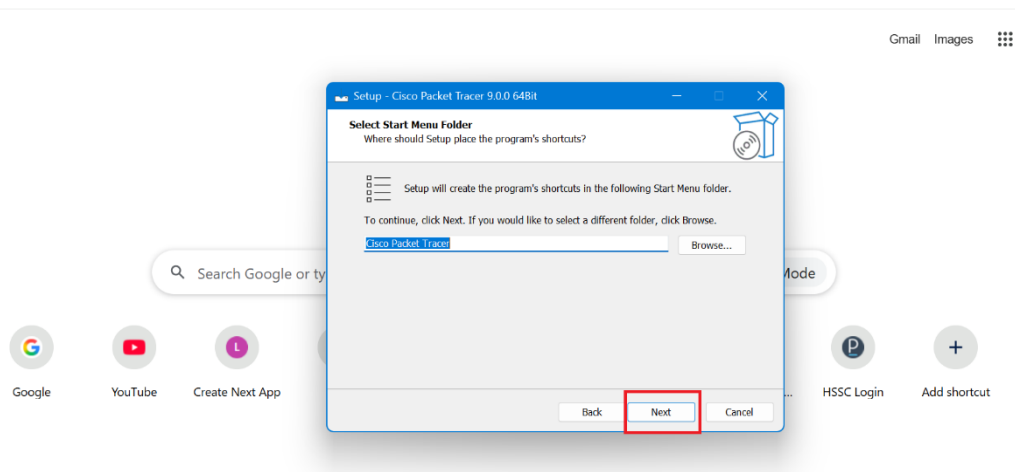

- Accept the License agreement and click “Next”.

Step 2: Set location

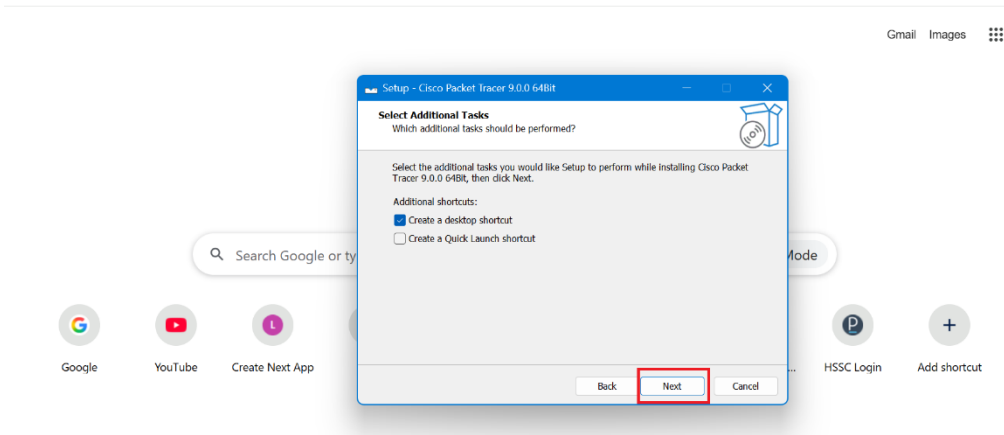

- Select your installation destination and hit “Next”.

Step 3: Set Menu Folder

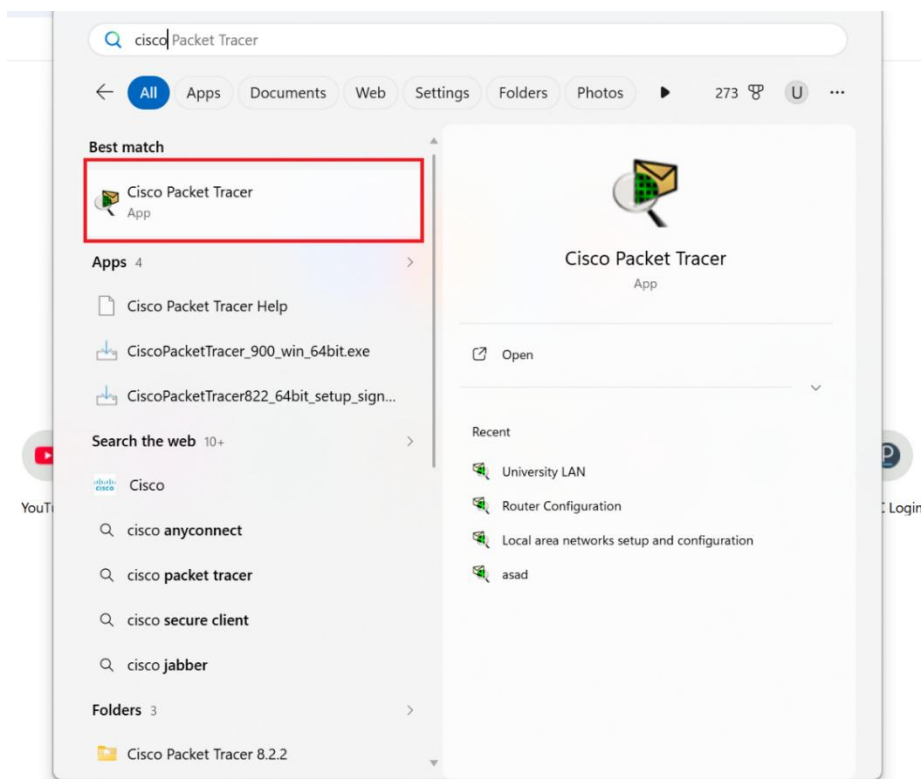

- Simply it creates start menu folder, hit “Next”.

Step 4: Create Desktop Icon

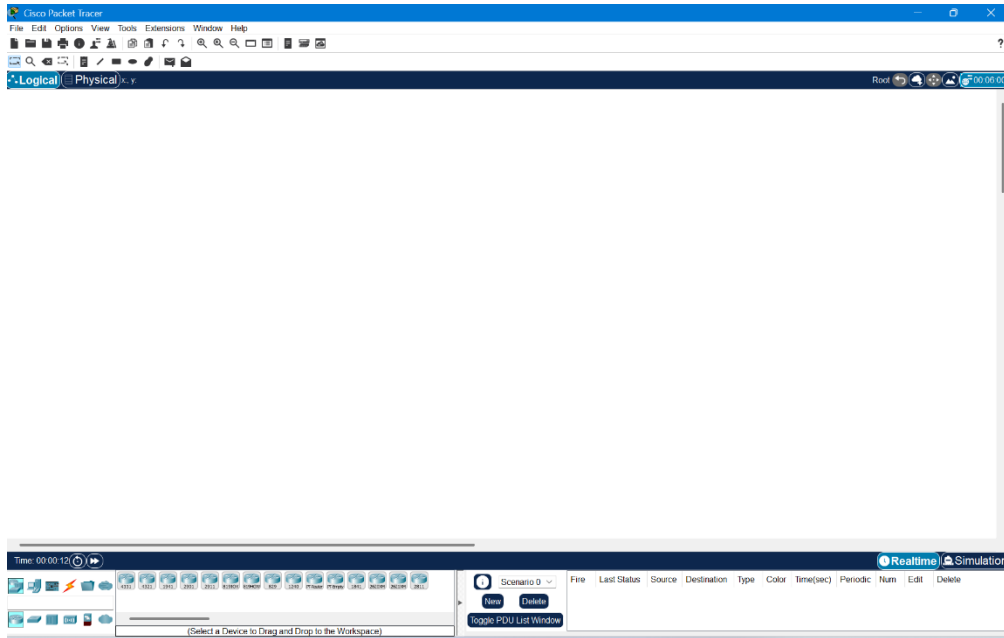

- If you want to create a Desktop Icon of Cisco Packet Tracer then mark it and hit “Next” and it will complete the installation.

Run Application

- Search it on start menu, here is the Cisco Packet Tracer. Click Enter to open it.

- It will display login button, click it and login using your credentials and here it is ready to create networks.
